Profile

Just a Passionate and Skilled Fullstack & Blockchain Developer with 7years of experience in web and 3years in blockchain.

My goal is to contribute my web & blockchain development expertise and customer service sales skills to your company. Believe your business currently serves real people with real issues and you need a dedicated webmaster to help build your business with responsibility, accountability, and exceptional service etiquette.

Looking for employment that utilizes my diverse business experience in Web & Blockchain Development and offers the opportunity for career advancement along with the further expansion of IT skills.

- Experience in Frontend UI technologies like HTML5, CSS3, JQuery, JSON, AJAX, React, Vue, Typescript, BackboneJS, Three.js, Tag Libraries, JSTL.
- Extensive experience on MySQL, MS SQL Server, IBM DB2 and NoSQL platforms (Mongo DB, Cassandra and Dynamo DB).
- Experience with various frameworks like Django, SpringBoot, Hibernate, Laravel, Next.js and Nuxt.js
- Good understanding and working experience in APIGEE Edge Platform, Restful web services using HTTP and SOAP web services.
- Excellent in deploying the applications in AWS as EC2 instances and create snapshots for the data that have to be stored in AWS S3.
- Solid understanding of Object - Oriented programming, Database Design and Query Optimization.
- Deep understanding of Ethereum, Hyper Ledger, Bitcoin, other Blockchain technologies and various consensus protocols.
- Excellent work experience with Version Control Tools such as Bitbucket, SVN and GitHub.
- Excellent critical and analytical thinking, written and verbal communication skills, quick learning, rigid attention to detail and ability to work independently as well within a team environment.

Work Experience

Senior Engineer & PM, Trenser Technology Solutions (P), Tokyo

Feb 2014 – Nov 2016

- Design and development of Invoice generation via email and printer using Jasper Reports.
- Took part in the production management system and business management system. I was in charge of backend and frontend. I used vue as a frontend framework and laravel as a backend framework. I succeeded here, so promoted to PM and contributed sales improvement of company.
- Developed front-end applications using ReactJS, Flux, NodeJS and Docker and Built Spring based Java and Scala services to support Enterprise Web application

Senior Engineer, Cellid Co., Ltd., Tokyo

Jan 2017 – Aug 2019

- Engaged in R&D work in the NLP field of Deep Learning and speed-up work of code for GPU, and was in charge of the project leader.
- Developed a UI that overlays digital information on a large-scale real space and visualizes it.
- In particular, developed applications for various devices such as Android and iOS using Unity.
- Took part in Ethereum based NFT Gift Card and NFT Point Reward Platform.

Fullstack & Blockchain Developer, Freelancer

Jan 2020 –

- Content integrated management system using CMS
Web system for delivering content appropriately and quickly to new channels that are increasing day by day. All content publishing is done through the API. It is possible to obtain accurate information that needs to be known about the daily work efficiency of staff. It is possible to classify the report on the monitoring category into the required conditions and output it.

-By migrating the server to the data center, we are making efforts not only for troubleshooting when replacing the system, but also for security and disaster countermeasures.

-Reduced man-hours by 23% by reducing the burden of server operation and integrating accounting and personnel salary data.
- Online payment system of card company (WEB version)

Undertook and developed a WEB system that allows online payment using the card balance. Interviewed sales employees who usually use the system, and designed it so that they could pick up and improve the efficiency of personal work that requires man-hours.

The system had the following configuration.

- Browser plugin: Introduced for transaction security
- Membership website (interface)
- Communication server with VAN server (backend)
- LP for a NFT release
<https://www.hapebeast.com/>
- <https://quizdrop.net/>
Developed the smart contracts in this project. Deployed reward contract and 2 token contracts(in Ethereum & Polygon mainnet).
- NFT Game And Marketplact based on both Ethereum and NEAR
Technical stack is rust, react.js, redux, web3.js
<https://github.com/atolan/nft-marketplace-QoQoo>

This is project of cultural reappropriation by using NFT art and gamification based on both Ethereum and NEAR for Desktop and Mobile.

Using Ethereum-to-NEAR bridge, allowed users to bridge their Ethereum ERC-20 tokens to NEAR for use within this project.

I was charge of NFT staking, unstaking, farming smart contracts.

Also helped web3 integration. This use a particular wallet called Narwallet to be able to provide all the features of the Tokenized stake pool into the game.

Educations

Bachelor's Degree, Tokyo University of Science, Tokyo

Sep 2008 – Mar 2013

- Major in Computer Science
- Bachelor's Degree Computer Science
- GPA: 4.0

Skills

Main Skills are as follows

- BlockChain: Smart contract, NFT, web3.js, Solidity, Solana, Ethereum, Haskell, Rust, Cardano
- Frontend: React/Gatsby/Next, Vue/Nuxt, Angular, JavaScript/TypeScript/jQuery, CSS/SCSS, Tailwind CSS/Ant Design/Material UI.
- Backend: Node.js/Express.js/Nest.js, Laravel, Django, ASP, C#
- Database: MongoDB, MySQL, Postgres
- Cloud service: AWS, Azure
- Version Control Tools: GitHub, Backlog, Bitbucket, SVN
- Testing: Jest, Selenium
- Languages: JS/TS, PHP, C#, C++, JAVA, Python

React.js

React Native

Javascript

C#

Web3.js

Next.js

Vue.js

Typescript

Nuxt.js

Rust

Solidity

Ethereum

NEAR

Ability To Multitask

Critical thinking and Problem solving

Time Management

Communication

Teamwork
